

Gajim

Description

The aim of [Gajim](#) is to offer a fully functional and easy to handle XMPP-Client. The most important features are:

- Chat-window with tabs or in single windows
- Support for group-chats
- Emoticons, avatars
- Audio- and video-conferences
- File transfer
- Support for several accounts
- Expandable scope of functions due to plugins

Installation

Linux Fedora:

```
sudo dnf install gajim
```

Microsoft Windows:

<https://gajim.org/downloads.php?lang=de#windows>

Use

In the beginning, the so-called Jabber-ID needs to be entered in Gajim:

- Accounts/ +
 - Select option „Ich habe bereits ein Konto, das ich benutzen möchte“ (ENG: “I already have an account, which I would like to use”)
 - Jabber-ID: <username>@xmpp.jade-hs.de
 - Password: Your password

Activation of **Plugins**:

- Plugins:
 - OMEMO
 - Plugin Installer
 - Plugin translations
 - Url image preview

After that, you should add your chat partner:

- Accounts / Add contact
 - JID: Type in the Jabber-ID of the chat partner
 - Nickname: Type in the name of the chat partner (normally last name, first name)
 - Add

Activation of the **OMEMO-encryption**: * double-click on the chatpartner, then click on the lock with the red exclamation mark in the bottom right corner within the chat window and activate OMEMO *
**remark: If you would also like to chat within the web surface of the [Collaboration Cloud](#), you should not Semester the OMEMO-encryption. The chat client within the web surface of the Collaboration Cloud does not support end to end encryption.
