

# PC-Technology

In the PC-technology, stationary and mobile service computers and peripheral devices of [members of the university](#) (excluding students) are configured, repaired and serviced.

The share of software in the service measures includes connection to the network, the operation system, the office-package, the control for malicious software and the data rescue.

The PC-technology is also responsible for the IT-components (computers, monitors, projectors) and the electric cabling of the tables in the [PC-rooms](#) run by the computing centre.

The execution of the „[E-Check](#)“ (periodic examination of the mobile electric equipment; DGUV regulation 3), as well as service measures of electric assemblies within the university computing centre and the PC-rooms are also tasks of the PC-technology.

The PC-technology can be found here:

Location	Room
Elsfleth	W 202
Oldenburg	MR 107
Wilhelmshaven	S E54
