

Pools

The provision of virtual desktops normally takes place in the form of so-called pools. The following pools -including their basic characteristics- are offered:

Virtual Desktop Pools with Numeral Identification starting from 100

- Available for all [members of the university](#) without application
- Works and should be treated like a **public computer**
- When logging in, any currently free virtual desktop will be allocated
- The users are locally allocated to the group „Users“
- The users can take advantage of all software products provided through the software menu

Virtual Desktop Pools with Numeral Identification under 100

- At the moment, they are only available for [members of the university \(excluding students\)](#) after filing an informal application
- Works and should be treated like a **personal computer**
- When logging in, one always gets allocated the same virtual desktop
- The user is locally allocated to the group „Administrators“
- The users can take advantage of all software products provided through the software menu
- The users can also install own software

Remark: Please note that **no personal virtual desktops can be provided at the moment**. This is due to restricted resources. Therefore, please use the pools with numeral identification starting from 100 or use a [VPN-connection](#), in order to access the services of the university.
