

# Pools

The provision of virtual desktops always takes place in so-called pools. The following pools with their essential properties are offered:

## Virtual desktop pools with the number marking from 100

- Available to all [university relatives and members](#) without application
- Behaviour like a **public PC**
- Any virtual desktop is assigned when logging in
- The users are assigned locally to the “users” group
- Users can use all software products made available via the software menu

## Virtual desktop pools with the number labelling below 100

- Currently only available for [university members \(with the exception of students\)](#) after informal application
- Behaviour like your **own PC**
- When logging in, the same virtual desktop is always assigned
- The user is assigned locally to the “administrators” group
- Users can use all software products made available via the software menu
- Users can also install their own software

Please note that due to the limited resources, **personal virtual desktops cannot be provided at the moment**. Therefore, use the pools with the number identification from 100 or use a [VPN connection](#) to be able to access the services of the university.
