

Cumulus

The Cumulus image database server is a media database that is available throughout the university. The HRZ provides catalogs for departments, institutes and central institutions on request.

Access for users is usually via the portal: <http://cumulus01.hs-woe.de/portals>

The Cumulus Client is sometimes more suitable. It is available as desktop software or via a web browser:

- Cumulus Desktop Client
 - Call via software distribution in the PC network system
 - Download under X:\HRZ-Support\cumulus
- Cumulus Web Client:
 - <http://cumulus01.hs-woe.de/cwc>

Editorial work - such as the management of images - done via the Cumulus Client. This can be found in the software menu of the HRZ, but can also be installed individually for installation on notebooks. The installation files for Windows and Mac OS are stored under X: \ HRZ-Support \ Cumulus.
