

Clients

To use a virtual desktop you need

- a program for your PC / an app for your smartphone - a so-called software client **or**
- a device that is able to access a virtual desktop - a so-called hardware client.

Hardware-clients

- thin and zero clients (e.g. [Dell Wyse Clients](#), [Samsung Zero Client Monitor NC241](#))

Software clients

After installation and configuration of a software client (see below) you get access to all virtual desktops provided for you in [Pools](#) after login.

Microsoft Windows

Omnissa Horizon Client for Desktops:

- Go to the [VD-environment vd.jade-hs.de](#) web page.
- Click on „Install Omnissa Horizon Clients“
- Omnissa Horizon Clients
- Download and install the latest software

Once launched, configure the Omnissa Horizon Client for Desktops as follows:

- Horizon connection server: **vd.jade-hs.de**
- Username: [default login](#) (form: ma1150)
- Password: <your password>

Apple macOS

Omnissa Horizon Client for Desktops:

- Go to the [VD-environment vd.jade-hs.de](#) web page.
- Click on „Install Omnissa Horizon Client.“
- Download and install the latest software.

After launching, configure Omnissa Horizon Client for desktops as follows:

- Confirm that you really want to open the app by clicking the „Open“ button.
- Start remote USB and print services: click „Next“.
- System extension blocked: Open the „Security“ system setting
 - Click on the lock (bottom left) to edit.

- Click the „Allow“ button
- Click on the lock again to protect it
- Close the window
- Access to accessibility
 - Click the „OK“ button
- Horizon Connection Server: **vd.jade-hs.de**
- Username: **default login** (form: ma1150)
- Password: <your password>

Ubuntu Linux

Omnissa Horizon Client for desktops:

- [Manual Horizon Client for Linux](#)
- [System requirements for Linux-Clientsysteme](#)
- [Uninstall Horizon Client for Linux](#)
- [Install Horizon Client for Linu](#)
- Go to the website of the [VD-Environment vd.jade-hs.de](#)
- Click „install Omnissa Horizon Client“
- Download and install the latest software

```
cd Downloads/  
chmod +x Omnissa-Horizon-Client*.bundle  
sudo apt install intel-media-va-driver intel-media-va-driver-non-free  
sudo apt install libudev0  
# deinstall old Omnissa-Horizon-Client, if available  
sudo ./Omnissa-Horizon-Client*.bundle -u omnissa-horizon-client  
  
# install Omnissa-Horizon-Client  
sudo ./Omnissa-Horizon-Client*.bundle
```

Components:

- Horizon Client: enabled
- PCoIP: enabled
- USB Redirection: enabled
- Smart Card: enabled
- Real-Time Audio-Video: enabled
- SerialPort Redirection: enabled
