

# Clients

To use a virtual desktop you need

- a program for your PC / an app for your smartphone - a so-called software client **or**
- a device that is able to access a virtual desktop - a so-called hardware client.

## Hardware-clients

- thin and zero clients (e.g. [Dell Wyse Clients](#), [Samsung Zero Client Monitor NC241](#))

## Software clients

After installation and configuration of a software client (see below) you get access to all virtual desktops provided for you in [Pools](#) after login.

### Microsoft Windows

Omnissa Horizon Client for Desktops:

- Go to the [VD-environment vd.jade-hs.de](#) web page.
- Click on „Install Omnissa Horizon Clients“
- Omnissa Horizon Clients
- Download and install the latest software

Once launched, configure the Omnissa Horizon Client for Desktops as follows:

- Horizon connection server: **vd.jade-hs.de**
- Username: [default login](#) (form: ma1150)
- Password: <your password>

### Apple macOS

Omnissa Horizon Client for Desktops:

- Go to the [VD-environment vd.jade-hs.de](#) web page.
- Click on „Install Omnissa Horizon Client.“
- Download and install the latest software.

After launching, configure Omnissa Horizon Client for desktops as follows:

- Confirm that you really want to open the app by clicking the „Open“ button.
- Start remote USB and print services: click „Next“.
- System extension blocked: Open the „Security“ system setting
  - Click on the lock (bottom left) to edit.

- Click the „Allow“ button
- Click on the lock again to protect it
- Close the window
- Access to accessibility
  - Click the „OK“ button
- Horizon Connection Server: **vd.jade-hs.de**
- Username: [default login](#) (form: ma1150)
- Password: <your password>

## Ubuntu Linux

- Go to the virtual desktop environment website <https://vd.jade-hs.de>
- Click on “Install Omnissa Horizon Client”
- Omnissa Horizon Client for Linux > Omnissa Horizon Client deb package for 64-bit Linux > GO TO DOWNLOADS
- Under the “Product Downloads” tab, download the latest software and install it

```
cd Downloads/  
# install Omnissa-Horizon-Client  
sudo dpkg -i ./Omnissa-Horizon-Client*.x64.deb
```

Components:

- Horizon Client: enabled
- PCoIP: enabled
- USB Redirection: enabled
- Smart Card: enabled
- Real-Time Audio-Video: enabled
- SerialPort Redirection: enabled
- Scanner Redirection: enabled
- Client Drive Redirection: enabled
- Multimedia Redirection: enabled
- HTML5 Multimedia Redirection and Browser Content Redirection: enabled
- VMware Integrated Printing: enabled
  
- Register and start installed service(s) after the installation: **Enabled**
- Click on „**Scan**“: all components should now be successfully installed.
- Click on „**Close**“.

Configure your client as follows:

- Horizon connection server: **vd.jade-hs.de**
- Username: [default login](#) (form: ma1150)
- Password: <your password>

## Apple iOS

From the Apple AppStore, download the „Omnissa Horizon Client“ app to your Apple iPad/iPhone. Configure the app as follows:

- Horizon Connection Server: **vd.jade-hs.de**
- Username: [default login](#) (form: ma1150)
- Password: <your password>

## Google Android

From the Google Play Store, download the „Omnissa Horizon Client“ app to your Android mobile device. Configure the app as follows:

- Horizon connection server: **vd.jade-hs.de**
- Username: [default login](#) (form: ma1150)
- Password: <your password>
