

Virtual Desktops

With the help of virtual desktops, university members and relatives can

- access the [PC network system](#) of the Jade University regardless of time, place and space
- use many of the [software products](#) offered and licensed on campus
- Find a working environment that is independent of the end device (bring your own device - BYOD)

Note: The currently procured infrastructure is suitable for the operation of virtual desktops with standard office applications. The virtual desktop infrastructure is not suitable for graphics-accelerated applications (image processing, CAD), for real-time audio & video (RTAV) applications (video conferencing), for computing-intensive applications and as a software development environment.

To use it, you usually need a [client](#) with which you can access the virtual desktop [pools](#). More information can be found [here](#).
