WLAN / Wi-Fi

The computing centre of the Jade University offers all university members the use of wireless LAN (WLAN / Wi-Fi) via the eduroam procedure. eduroam is a worldwide infrastructure for WLAN / Wi-Fi access. With the uniformly used SSID “eduroam”, a member of a participating organization can use WLAN / Wi-Fi access with all other eduroam participants.

When establishing a connection, each user logs in to their home institution, even if they are logging in to another eduroam participant. The WLAN / Wi-Fi configuration must be set up securely by the user so that the login only takes place with the login server of the home institution.

Further information can be found here:

- Wikipedia: eduroam
- IETF: The eduroam Architecture for Network Roaming

There is currently no active management of mobile devices at the Jade University of Applied Sciences. As a result, you may be asked for a certificate on your device. Therefore, please confirm the presented certificate as long as it is issued by the certification authority “**T-TeleSec GlobalRoot Class 2**”.

The configuration of the Wi-Fi eduroam can be found in the respective submenu points for your operation system (and its producer):

- Apple iOS
- Apple macOS
- Google Android
- Ubuntu Linux
- Microsoft Windows
